## SUMMARY

Backend-focused software engineer with a year of experience at an early-stage startup building **Python services** and end-to-end **AI media pipelines**. Built a **Kafka-based game-event replay system**, **FastAPI** services, and a real-time simulator that streams game state to a **React UI over WebSockets**, alongside an **LLM-driven sports-commentary pipeline** integrating Gemini/Groq for text and ElevenLabs for speech. Comfortable across API design, event streaming, databases, and applied LLM integration. Seeking **backend**, **full-stack**, or **AI-engineering roles** at product companies and startups.

## TECHNICAL SKILLS

|                |                                                                   |
|----------------|-------------------------------------------------------------------|
| Languages      | Python (primary), SQL, JavaScript, Java                           |
| Backend & APIs | FastAPI, Flask, REST APIs, WebSockets, Apache Kafka               |
| Databases      | PostgreSQL (Supabase), SQLite, MySQL                              |
| AI / LLM       | LLM API integration (Gemini, Groq), prompt design, ElevenLabs TTS |
| Media / Tools  | ffmpeg (video & multi-channel audio), pydub                       |
| Cloud & DevOps | AWS (EC2, S3), Docker, Git, Linux                                 |

## EXPERIENCE

### Software Developer Intern · Fayble Inc.

Jul 2025 – Jun 2026

California, USA (Remote) — AI sports-simulation platform

- Architected a **Kafka-based game-event replay system** in Python that ingested feeds across **19 simulated games (~1,274 messages)**, **deduplicating** by (game\_id, message\_num) and preserving **event ordering**, with separate blast and timestamp-accurate real-time replay producers.
- Developed **FastAPI** services to serve game events to clients, including a **polling API** with feed-type filtering and a simulator exposing a **WebSocket contract** (snapshot, play, commentary, game-end) consumed by a **React scoreboard** for live game state.
- Implemented an **LLM-driven commentary pipeline** that converts game events into broadcast-style dialogue using **Gemini** and **Groq**, then synthesizes speech with **ElevenLabs**; benchmarked providers and found **Groq ~10x faster** for text generation, and designed a single-emotion-per-play approach that **cut audio generation time roughly threefold**.
- Produced an **archery video-production pipeline** that stitched pre-recorded clips into full matches with **ffmpeg** (crossfades, multi-channel audio) and synced AI-generated commentary, emitting **structured per-play metadata** for the platform's feeds.
- Contributed to a **Supabase-backed wagering portal** (FastAPI + Jinja2), implementing bet-placement flows via **Postgres RPCs** with **row-level security** and a leaderboard.

## PROJECTS

### Real-Time Event Streaming Pipeline — Python · FastAPI · Kafka · WebSockets · SQLite

- Engineered a pipeline that replays timestamped sports-event feeds through **Kafka** and ingests them into **SQLite** with **deduplication and ordering guarantees**, exposing a **FastAPI** endpoint for clients to fetch events by sequence number and feed type.
- Streamed live game-state updates to connected browser clients over **WebSockets**, driving a **React** scoreboard with scores, clock, and play data.

### AI Sports-Commentary Engine — Python · Gemini · Groq · ElevenLabs · pydub

- Designed a **three-stage pipeline** (event ticker → LLM brain → TTS voices) turning play-by-play data into dual-commentator audio, with **context tracking** for score, momentum, and player performance to shape narration intensity.
- Benchmarked **LLM and TTS providers** for latency and cost, choosing configurations that balance quality against generation speed.

### Workout Tracker with Progress Visualization — React · Flask · MySQL · Chart.js · Docker

- Created a full-stack fitness tracker with a **React** frontend, **Flask** REST API, and **MySQL** for exercise logging and progress visualization, with **JWT authentication** and input validation, containerized with **Docker** for consistent deployment.

## EDUCATION

### M.S. Computer Science — University of Texas at Arlington

Aug 2023 – May 2025

Arlington, TX, USA · GPA 3.42 / 4.0 · Focus: Artificial Intelligence & Software Engineering

### B.E. Electronics Engineering — University of Mumbai

Aug 2019 – May 2023

Mumbai, India · GPA 8.36 / 10

**Competitive Coding** LeetCode — 300+ problems solved across data structures and algorithms · leetcode.com/anuragb2901
