SUMMARY

Data engineer and analyst with a year on the founding team of an early-stage AI sports startup where game events moved through **Kafka** into live sports-statistics delivery. Works in **SQL**, **Python**, **Power BI**, and **Excel** across **PostgreSQL**, **MySQL**, **dbt**, **Airflow**, and **Kafka**, taking data from raw source tables to modeled, tested, and reconciled marts and the dashboards built on them.

TECHNICAL SKILLS

Languages: SQL (window functions, CTEs, query tuning), **Python** (pandas, SQLAlchemy), **Java** (core, DSA)
Databases: PostgreSQL (partitioning, indexing, materialized views), **MySQL 8**, **BigQuery**, **Redis**
BI and Analytics: Power BI (DAX, Power Query, RLS), **Excel** (PivotTables, XLOOKUP), **A/B testing**, funnels and cohorts, Metabase
Data Engineering: dbt, **Apache Airflow**, **Apache Kafka**, **Debezium** (CDC), dimensional modeling, SCD Type 2, data quality testing
Cloud and Tools: Docker, Docker Compose, **AWS S3**, Git

EXPERIENCE

Software Developer (Founding Team) | Fayble Inc. | Oakland, CA, USA | Jan 2026 - Jun 2026

Software Development Intern | Fayble Inc. | Oakland, CA, USA | Jul 2025 - Dec 2025

AI sports-simulation platform

- Engineered the **audio pipeline** for an AI sports-commentary system, generating dual-commentator speech with **ElevenLabs** and stitching per-play clips into continuous broadcast output.
- Moved commentary text generation from **Gemini** to **Groq** and chose a one-emotion-per-play voice design over per-segment emotion stitching, keeping full-game audio generation fast and within free-tier limits.
- Automated archery match production with **ffmpeg**, joining AI commentary, **7.1 (8-channel) audio** with broadcast trigger tones, and **structured per-play metadata** into finished match videos.
- Integrated **Apache Kafka** into the platform's animation flow and sports-statistics delivery, replaying **19 games** (about **1,274 event messages**) through an ordered ingestion path that rejected duplicates, serving game state through a **FastAPI** API.

PROJECTS

E-Commerce Analytics Warehouse | *MySQL, PostgreSQL, Python, dbt, Airflow, Power BI, Excel, Docker*

- Replayed the public **Olist** dataset (about **100,000 orders**) into **MySQL** as a live operational source, and modeled a **PostgreSQL star schema** in **dbt**: order, payment, and review facts over customer, product, seller, and date dimensions.
- Scheduled **idempotent incremental loads** in **Airflow** with **SCD Type 2** customer snapshots, enforced by **85 dbt tests** and row-level **reconciliation** against MySQL.
- Built a 4-page **Power BI** report: **20+ DAX measures** (YoY/MoM, cohort retention), seller drill-through, **row-level security**.
- Delivered a monthly seller **Excel** workbook (**Power Query**, **PivotTables**, **XLOOKUP**) reconciled to the Power BI totals.

Change Data Capture Pipeline: MySQL to PostgreSQL | *MySQL, Debezium, Apache Kafka, Python, PostgreSQL, Docker*

- Streamed row-level changes from the **MySQL binlog** through **Debezium** and **Kafka** into **PostgreSQL**, applying inserts, updates, and deletes as **idempotent upserts** keyed on primary key and source position.
- Replayed **1 million change events** at **p95 lag of 141 ms** through an added column and a consumer killed mid-batch, with **0 lost or duplicated rows** by per-table **checksums**.

PostgreSQL Query Performance on NYC Taxi Data | *PostgreSQL, MySQL 8, SQL, Python*

- Loaded about **38 million** 2023 NYC TLC yellow-taxi trips into **PostgreSQL** with COPY, **range-partitioned by month**, and wrote 12 analytical queries using **window functions**, **CTEs**, and percentile aggregates.
- Cut the suite's median query from **488 ms to 19 ms** with **partition pruning**, **BRIN** and covering indexes, and **materialized views**, verifying identical results and every plan with **EXPLAIN ANALYZE**; compared against **MySQL 8**.

Product Analytics and A/B Testing | *BigQuery, dbt, SQL, Python, SciPy, Evidence*

- Modeled Google's **GA4** export (**4.3M events**) in **BigQuery** with **dbt** into sessions, funnel, and retention cohorts; **27 tests** caught **314 duplicated purchases** (6.3% of revenue).
- Validated an **A/B testing** toolkit on simulated experiments (daily peeking: **29.7%** false positives, sequential test: **1.5%**) and read out **Criteo's 14M-user** experiment, correcting a confounded **+27.1%** lift to **+19.5%**.

EDUCATION

M.S. Computer Science | University of Texas at Arlington | Aug 2023 - May 2025
GPA 3.42/4.0 | Focus: Artificial Intelligence and Software Engineering | Arlington, TX

B.E. Electronics Engineering | University of Mumbai | Aug 2019 - May 2023
GPA 8.36/10 | Mumbai, India

Competitive Coding: LeetCode 450+ problems in Python and Java (data structures and algorithms) | leetcode.com/anuragb2901
