SUMMARY

Backend-focused software engineer with a year of experience building Python services and real-time, event-driven systems at an early-stage startup. Experienced with REST APIs, Kafka-based event streaming, PostgreSQL, WebSockets, Docker, AWS, and AI/ML service integration. Building production-style backend systems in Java and Spring Boot, with hands-on experience across API development, distributed systems, databases, and asynchronous processing.

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript

Backend & APIs: Spring Boot, FastAPI, Flask, REST APIs, WebSockets, Apache Kafka

Databases: PostgreSQL, MySQL, SQLite, Redis

Java: Java 17, Spring Data JPA, Hibernate, Maven, JUnit/Mockito

Architecture: Microservices, Event-Driven Systems, Distributed Systems, API Design

AI / ML: Gemini, Groq, ElevenLabs, PyTorch, TensorFlow, Scikit-learn

Cloud & DevOps: AWS (EC2, S3), Docker, Git, Linux

EXPERIENCE

Software Developer Intern · Fayble Inc.

Jul 2025 – Jun 2026

AI sports-simulation platform · California, USA

- Developed the audio side of a real-time AI sports-commentary system, generating dual-commentator speech with ElevenLabs TTS driven by a game-state intensity model and stitching per-play audio into continuous broadcast output.
- Designed a single-emotion-per-play approach that reduced audio generation time roughly threefold, after benchmarking LLM providers including Gemini and Groq and finding Groq approximately 10× faster for text generation.
- Produced an archery video-production pipeline using ffmpeg that stitched pre-recorded clips into full matches with crossfades and multi-channel audio, synchronized with AI-generated commentary and structured per-play metadata.
- Built a Kafka-based game-event replay system handling 19 games and approximately 1,274 messages with deduplication and ordering preservation.
- Developed FastAPI services and WebSocket-based real-time streaming to deliver game-state updates to connected React clients.

PROJECTS

Compliance Document Processing Platform

Python · FastAPI · PostgreSQL · Redis · Kafka · Docker

- Building an asynchronous backend platform that accepts documents through REST APIs, processes them through background workers, and stores extracted metadata and processing results in PostgreSQL.
- Designing Kafka-based event processing for decoupling document ingestion, processing, and downstream analysis, with Redis used for caching and transient job state.
- Implementing authentication, request validation, processing-status APIs, retry handling, and structured error handling for reliable backend workflows.

AI Transaction Risk Analysis Platform

Java · Spring Boot · Python · FastAPI · Kafka · PostgreSQL · Docker

- Building a polyglot event-driven backend in which Spring Boot handles transaction APIs and business logic while a Python service performs risk analysis and anomaly detection.
- Designing Kafka-based communication between Java and Python services for asynchronous transaction processing, risk-score generation, and downstream alerts.
- Implementing PostgreSQL persistence, service-to-service APIs, containerized deployment, and failure-handling mechanisms to demonstrate integration of AI/ML components with backend services.

Distributed Job Scheduling & Workflow Platform

Java 17 · Spring Boot · PostgreSQL · Redis · Kafka · JUnit · Maven · Docker

- Building a distributed job-scheduling backend that allows users to create, schedule, execute, cancel, and monitor asynchronous jobs through REST APIs.
- Designing worker-based execution with Kafka for job distribution and Redis for distributed coordination, supporting priorities, retries, timeouts, and failure recovery.
- Implementing Spring Data JPA/Hibernate persistence, database indexing, execution history, validation, and unit tests with JUnit and Mockito.

EDUCATION

M.S. Computer Science — University of Texas at Arlington

Arlington, TX, USA · GPA: 3.42 / 4.0 · Focus: Artificial Intelligence & Software Engineering

Aug 2023 – May 2025

B.E. Electronics Engineering — University of Mumbai

Mumbai, India · GPA: 8.36 / 10

Aug 2019 – May 2023
